- Set the desired torque before using the torque wrenches.
- When torque is applied, a click can be heard and felt when the desired torque is reached. This feature is more evident in the higher range of the scale.
- Graduated scales in SAE and Metric measurement systems are etched on the shaft. They are horizontal on the shaft and vertical on the handle.
- Continuous-use design offers the user an excellent precision tool for specific torques.
- All parts are made of steel and tempered to prevent wear. Outer parts have a nickel-chromium coating to prevent oxidation.
- The lever on the ratchet head can be positioned for ratchet action to the left or to the right.
- Double armature: exclusive internal design minimizes the amount of force required, reduces friction, lengthens tool life and permits precise, long-lasting calibration.
- Meets or exceeds the requirements of ANSI & DIN standards with accuracy of $\pm 4\%$ in clockwise direction.

Torque Extension Bars:

- Torque Extensions are designed for 1/2" Dr. impact wrench rated 380-420 ft.lb.; 3/4" Dr. impact wrench rated 750 ft.lb.; 1" Dr. impact wrench rated 1,500 ft.lb.
- The various drive sizes and torque limits allow use of any impact socket with a torque extension to match the different lug nut sizes found on vehicles
- Helps prevent over-torquing of wheel nuts and can minimize wheel distortion.
- The unique design allows the length and diameter of the torque extension shaft to flex with each blow of the impact wrench once the specified torque is reached.
- Accurate to within +/- 4%.
